

Coding goals:

Use your knowledge of “**comments**” and fraction visuals to create videos that show solutions to fraction division problems.

Coding and Math goals:

This is part of your final art integrated assessment for fraction division!

Be diverse and focused!

Coding goals:

Let's get to know the coding first!

Making and Downloading Videos with Fraction Objects

Change the fractions and comments.

Change the speed.

08:00

Creating a video for multiplication

Change the multiplication problem.

Change the comments.

Change the speed.

08:00

Video part 2

Adding text to your video.

Adding picture to your video.

Putting it all together.

08:00

Warm ups

Pass the student handout with division problems.

Work independently on your warm ups.

Think about how you can use the coding you just learned to show your solutions!

Use the coding!

Check with your team that you agree on the correct diagrams and solutions.

Check your answers on the computer using coding.

Create videos to show your answers. Download them if finished!

08:00

Shout outs!

Main lesson

Work independently on your assigned problem

Work on a different problem if you have extra time.

Think about how you can use the coding you just learned to show your solutions!

Use the coding!

Check with your team that you agree on the correct diagram and solution.

Check your answers on the computer using coding.

Create videos to show your answers.

20:00

Download them if finished!

Diversity, Details, Organization

Add pictures or comments to explain

Shout outs!

Creativity Practice

We want to create a story about our fraction video!

We will practice being creative by adding images that correspond to the video story.

Optional: Use next slides to practice the story.

Create a visual or a story

The images are examples of a land made of:

Pudding (chocolate or vanilla)

Cookies (oreos or vanilla wafers)

Whipped cream and a gummy worms
